

Salesforce Developer Project

We started working on a custom LWC component that would display a table of warm accounts on a home page, but it is not working and needs some enhancements.

Setup Steps

Step 1 - Install the project in a Trailhead Playground (should be 1 LWC and 1 Apex class)

Step 2 - Add the LWC component (ehAccountTable) to a Home Page.

Tasks

- 1 - Fix the table so it displays warm accounts
- 2 - Remove the Ticker Symbol column. Instead allow the ticker symbol to display as a tooltip in the name column.
- 3 - Add a new column that displays the number of associated contacts
